

PUBLIC RESPONSE

We would like to provide additional updates that relate to the findings in HCSA Peer Review Report of PT Paramitra Internusa Pratama (PIP) :

1. HCS assessment of PT PIP was conducted in January 2011 (before the HCS Toolkit provided), to October 2017. This assessment became the pilot project on HCS approach's early development. At that time, there was no requirement about registered practitioner. This report was prepared by GAR, TFT and Greenpeace.
2. Review process began in 2019, it seems need long time to produced report because we need adjusted this assessment based on HCSA toolkit ver. 1.0.
3. The HCS Assesment in PT PIP was carried out separately from the HCV assessement , conducted in March 2010 until June 2012 which was prepared by Faculty of Forestry Bogor Agriculture University (IPB). While HCS assessment was undertaken internally due to no requirement of registered practitioner or must be done independently.
We also hope that panellist reviews using the HCSA toolkit ver. 1.0 as a reference and not required yet for integrating HCV – HCS assessment.
4. We have done the Land Tenure Study (LTS) as stated in Social Impact Assessment report, although there will be plenty of gaps since there was no spesific standart/protocol for detail assessment at that moment (before the Toolkit ver 2.0).
